

## **Jo's Handpicked, dried & shredded Hensting Alpaca Fertiliser – for indoor and outdoor use**

This fertiliser was first processed by our dear friend Jo, we are delighted to be able to continue making it in her memory.

We are very excited that you have bought our very own handpicked, dried and shredded alpaca fertiliser to use on your plants, indoors and outdoors.

Let's get started. Find a clean watering can. Fill with warmish water and add roughly two heaped tablespoons to 4.5 litre can – alpaca fertiliser won't burn your plants. You can leave your can in the sun or a warm place to mellow (this is when the magic takes place). Once you are happy that the fertiliser is well mixed together with the water, pour onto your plants and watch them grow.

This can also be added as a top dressing to plants and forked in to the compost

If you would like to re-order please e-mail us at [derek@alpacas-hampshire.co.uk](mailto:derek@alpacas-hampshire.co.uk) and we shall get some posted to you.

We also have a liquid version available
